TIGRIDIA

(Mexican Sheil Flower)

These unique, but little known flowers come from the ancient gardens of Mexico. Flowering in midsummer, the three outer petals form a triangular pattern which is repeated in the arrangement of the three smaller center petals, which are spotted in tiger fashion. Although the individual flower lasts only one day, plants are free blooming and lend a dominant color note to your garden for many weeks. Plants attain a height of 2 to 2½ feet, with short, sabre-like foliage and may be used as cut flowers if the stems are seared immediately after cutting. Bulbs should be planted 4 inches deep in the spring when the soil is warm. They prefer rich soils and full sun. In late autumn the bulbs must be dug, dried, and stored in a cool, dry place for the winter. Varied shades of brilliant orange, scarlet, pink and white and lilac, blotched and spotted with shades of crimson and maroon.

Mixed only, \$1.55 per doz.; \$3.00 per 25
